LINKEDIN GITHUB

Data and AI engineer trained in France. I build AI systems that run in production, and I measure what they change: LLM agents that automate business processes, explainable fraud-detection models, decision dashboards and websites. Two years at ASCOMA in Paris, as an intern then full-time, on fraud and compliance in health insurance. Now founder of AD Design in Yaoundé, a web, AI and training studio. My rule: a human keeps the final decision, and every project is judged on a number.

2 days → 1 h
To produce a United Nations tender offer, with 5 AI agents

x14
Posting frequency for a non-profit, with no human in the loop

90 %
Of bookkeeping entries automated, approved by a human

1 / 390
Outlier provider isolated among 390 pharmacies

PROFESSIONAL EXPERIENCE

2026 – NOW

Founder · Data & AI Engineer · AD Design, Yaoundé

Studio for web development, AI automation and training. Run with my business partner, a graduate of my training program.

Multi-agent automation system · NORDSUDTT

Satellite telecoms (VSAT, Wi-Fi, WiMAX) in Africa · tenders from United Nations agencies

- **Problem**: mail, supplier sourcing, offer writing, invoicing and bookkeeping were fully manual; one offer took 2 days.
- **Architecture**, designed as a team: 1 main agent orchestrating 4 specialised agents (mail triage, technical and commercial offers, invoicing, accounting), connected to the company's email. Running in production.
- **Reliability**: a 95% minimum match rule between client specifications and proposed products, which removed most price gaps; attachments explicitly flagged in the request sent to the agent.
- **Quality control**: a 100-point scoring grid for agent outputs, used in reviews; technical reports for the project.
- **Results**: offer lead time cut from 2 days to about 1 hour (16× faster) · about 5 offers produced per day.

OHADA / SYSCOHADA accounting agent · NORDSUDTT

Sub-project I led end to end

- Wrote the **specifications**, tested them against the accountant's needs, then had them approved by stakeholders.
- **Modelled** the processing timeline of a document received by email: receipt, classification, posting under the chart of accounts, proposed entry. This breakdown became the backbone of the agent, built on **Claude**.
- **Safeguard**: the agent proposes, the accountant approves. **90%** of entries automated, 100% approved by a human.

AI outreach pipeline · Stroke Action

Stroke-awareness non-profit in Yaoundé, with no communications team

- Daily pipeline with no human intervention: writing from an editorial plan of **50 posts over 2 months → 1-minute video rendered by code** with openly licensed music → approval by the medical lead → delivery by a messaging bot.
- Design choices: mandatory medical approval on a public-health topic; **no paid services**, open components only.
- **Result**: from 1 post every 2 weeks to 1 a day, 14 times more often with the same resources.

SKILLS

AI & LLM
Multi-agent architectures, agent orchestration and tooling, prompt engineering, Claude, output evaluation (scoring grids), human in the loop

Machine learning
Logistic regression, Random Forest, XGBoost; anomaly detection (Isolation Forest, LOF); K-Means, DBSCAN

Method & XAI
Stratified validation, imbalanced classes (SMOTE, weighting), precision / recall / F1 / PR-AUC; SHAP, LIME

Data & BI
Python (pandas, NumPy, scikit-learn, imbalanced-learn, Matplotlib), SQL / NoSQL, ETL, deduplication, Power BI, Excel VBA, pivot tables

Web & tools
JavaScript, React, Next.js, Vercel, Docker, Git, Jupyter, Google Colab, Claude Code

Project management
Specifications, requirements gathering, SCRUM, commercial proposals, contracts, technical reports

LANGUAGES

French	native-level
English	fluent, bilingual
Spanish	basic

PROFESSIONAL EXPERIENCE (CONTINUED)

2026 – NOW

Founder · Data & AI Engineer · AD Design, Yaoundé

Client websites

- **strokeaction.org** (live): specifications drawn from the bylaws and 2026-2030 strategic plan; bilingual React / Next.js, online donations, members' area; logo, brand guide, domain and hosting; three-tier offer, signed contract, social media management as follow-up.
- **ALIEM Shopping**, Bastos, Yaoundé (in production): Next.js store on Vercel, catalogue in 6 categories, ordering through a pre-written WhatsApp message, in-store appointments, delivery in Yaoundé and Douala; Google Business Profile listing.
- **Clinique Angelo**, Douala (in progress): website for a new surgical clinic; services written for patients, launch offer and introductory prices, blue visual identity.

AI training program

Founder and program lead

- A **3-level** curriculum on professional use of AI assistants (Claude) and automating business tasks; project-based learning; hybrid format designed for unreliable connectivity (Google Colab).
- **3 learners** trained, **one of whom became my business partner** at AD Design; target audiences: students, career changers, professionals; learning platform in design.

2024 – 2026

Managing the family business · Cameroon

SEP 2022 – MAY 2024

Data Analyst Engineer · Full-time · ASCOMA Group, Paris

Insurance broker (≈ 700 employees, 23 countries). Mission: make fraud and non-compliance easier to detect for teams across the group and its subsidiaries.

- **Consolidated Power BI dashboards** bringing heterogeneous data sources together (ETL pipelines) to simplify decision-making.
- **Data detection and controls** with the compliance team; organising and querying information in **SQL**.
- **Automated** fraud and non-compliance analyses: Excel **VBA** macros and pivot tables.
- Assessed the **operational impact** of decisions taken by audit and risk management based on these dashboards.

MAR – AUG 2022

Data Analyst · Final-year internship (6 months) · ASCOMA International, Paris

Internal audit and control unit, health technical department. Goal: a tool to automate fraud and non-compliance detection in health insurance.

- **Regulatory checks**: automated two CIMA code controls (premium collection, cash before cover) in VBA on exports of about **12,000 rows**, previously checked by hand. Excel was chosen because auditors already used it.
- **Data quality**: deduplication of reversals cut from $O(n^2)$ to a keyed join (pandas).
- **Benchmark of 7 methods** under one protocol: business rules, Isolation Forest, LOF, logistic regression, Random Forest, XGBoost, SMOTE. Evaluated on precision, recall, F1 and PR-AUC (2% fraud); alerts explained with **SHAP** for auditors.
- **Investigation** across 390 pharmacies: isolated one provider accounting for ≈ 1/6 of a country's premium consumption in 2 months; report sent to the subsidiaries.
- **Domain modelling**: 10 fraud scenarios turned into indicators with the experts (visit frequency, distance between two centres on the same day, procedure/diagnosis consistency, name similarity); reporting in Power BI.
- **Engineering thesis**: "Anomaly and fraud detection in health insurance, from rules engine to explainable machine learning".

SEP – NOV 2020

IT engineering intern · Montpellier University Hospital

- Effect of HIV PrEP on resistance to other STIs: **SQL database** structuring online questionnaires, analysis in **Mathematica**, sensitive health data.

EDUCATION

2019 – 2022

MEng, Big Data / Data Engineering
EPF Engineering School, Montpellier · CTI-accredited · data visualisation, data modelling, SQL and NoSQL

2017 – 2019

Preparatory classes, maths & physics (MPSI)
PrépaVogt, Yaoundé

2017

French Baccalaureate, science track (C)
Mathematics and physics · Collège Vogt, Yaoundé

OpenClassrooms: "SQL: query databases" · "Power BI: build your dashboards"

ACADEMIC PROJECTS · EPF

Water treatment plant, Montpellier
Team lead: extraction, Python cleaning, Power BI reporting, team coordination.

Banking data (I)
Customers, transactions, statements: Excel cleaning, advanced SQL queries.

Banking data (II)
Power BI: customer segmentation criteria, indicators by product and income.

DOMAINS

Health insurance · Compliance (CIMA code) · Internal audit · OHADA / SYSCOHADA accounting · Telecoms · Public health · E-commerce

MORE

- International experience: France 2019 – 2024
- Driving licence (B)
- Portfolio: detailed case studies on request
