I build AI systems that run in production, and I measure what they change: LLM agents for business automation, explainable fraud-detection models, dashboards and websites. Two years in France in insurance (ASCOMA), then founder of AD Design, a web and AI studio in Yaoundé. My rule: a human keeps the final decision.

2 days → 1 h
To produce a United Nations tender offer, with 5 AI agents

x14
Posting frequency for a non-profit, with no human in the loop

90 %
Of bookkeeping entries automated, approved by a human

12 → 3
People trained in AI, 3 of them hired

EXPERIENCE

2026 – NOW

Founder · Data & AI Engineer · AD Design, Yaoundé

- **Multi-agent system (NORDSUDTT)**: 1 main agent orchestrating 4 agents (mail, offers, invoicing, accounting). 95% match rule, 100-point scoring grid. UN offer: **2 days → 1 hour**.
- **OHADA / SYSCOHADA accounting agent**, a sub-project I led: specifications, process model, implementation on Claude. **90%** of entries automated, always approved by a human.
- **AI outreach pipeline (Stroke Action)**: text + programmatic video, medical approval, no paid APIs. **1 post every 2 weeks → 1 a day**.
- **Websites**: strokeaction.org (React / Next.js, bilingual, donations, members' area), ALIEM Shopping and Clinique Angelo (in progress). **AI training**: 12 learners, 3 hired.

2024 – 2026

Managing the family business · Cameroon

SEP 2022 – MAY 2024

Data Analyst Engineer · Full-time · ASCOMA, Paris · insurance brokerage

- Consolidated multi-source **Power BI** dashboards for the group and subsidiaries; data controls in **SQL** with the compliance team.
- Automated fraud and non-compliance analyses in **VBA**; tracked the impact of audit and risk-management decisions.

MAR – AUG 2022

Data Analyst · Final-year internship · ASCOMA, Paris · internal audit and control

- Automated 2 CIMA code controls in VBA on **~12,000 rows**; deduplication cut from $O(n^2)$ to a keyed join (pandas).
- Benchmarked **7 methods** (Isolation Forest, LOF, XGBoost, SMOTE…) on precision, recall, PR-AUC; alerts explained with **SHAP**.
- Investigation across 390 pharmacies: **1 provider** isolated (≈ 1/6 of a country's premiums in 2 months).
- Engineering thesis: health insurance fraud detection, from rules engine to explainable ML.

SEP – NOV 2020

Engineering intern · Montpellier University Hospital · SQL database and analysis, HIV PrEP study

EDUCATION

2019 – 2022

MEng in Big Data / Data Engineering
EPF Engineering School, Montpellier · CTI-accredited

2017 – 2019

Preparatory classes, maths & physics (MPSI)
PrépaVogt, Yaoundé

2017

French Baccalaureate, science track (C)
Collège Vogt, Yaoundé

OpenClassrooms certificates: SQL · Power BI

SKILLS

AI & LLM
Multi-agent systems, prompt engineering, Claude, human in the loop

Machine learning
XGBoost, Random Forest, Isolation Forest, LOF, K-Means, SMOTE, SHAP

Data
Python (pandas, NumPy, scikit-learn), SQL / NoSQL, ETL, Power BI, Excel VBA

Dev
JavaScript, React, Next.js, Docker, Git, Google Colab

Project
Specifications, SCRUM, client relations

LANGUAGES & MORE

French
native-level

English
fluent, bilingual

Spanish
basic

Driving licence (B) · Mobile between France and Cameroon
